

<HTML/CSS> kurzus

Start: 9th of April, Saturday

In the course of the training we will learn the basics of HTML/CSS, we will take a look at web development and create a website! And what is still coming? A little bit of JavaScript, animations/transactions (with CSS), fun things: sensors, accelerometers. By the end of the 5 weeks long course you will be able to make your own website, your own game.

On the first 2 days we will learn the basics through theoretical and practical examples, then through 4 weeks on Saturdays we have a workshop where with the cooperation of our mentors we have the chance for a group consultation and to discuss the previously given homework.
